

## XstorePlus

Unified Retail Management

### Right Tools, Right Size

XstorePlus, the all-in-one retail management solution for smaller chains. The install is fast, and you have the comfort of knowing that the solution is backed by one of the leading names in retail software.

- POS software—the robust functionality of the larger chains without the custom price
- Workforce management module—electronic scheduling and timecard solution
- Inventory module—supports store-level physical counts
- Pricing module—create and enforce price changes and deals at the point-of-sale
- Layaway module—layaway is regaining popularity with customers, and you can make it profitable
- Receiving and ticketing module—electronically record received goods and generate barcoded tickets
- Transfer/distribution module—accurately track inventory as it is moved from one store or distribution center to another
- Advance Planning/Open to Buy module—develop and edit a buying plan for the year. Compare previous years, develop what-if scenarios, design an assortment plan, and create the ideal roadmap
- Purchase order creation module—electronically create and submit purchase orders complete with pre-distribution instructions to multiple stores or a single delivery location; optional EDI interface available
- Invoice matching—electronically pass receiving information to your accounting system to ensure you take all the discounts you deserve
- Replenishment module—maintain the stock levels you need using this automated replenishment and suggested reorder module (optional module)
- Customer relationship management module—link your customers with their purchases and use the information to generate custom mailings
- Reporting module—store and warehouse reporting helps you maximize the profitability of your business

### Security Features

XstorePlus follows industry best practices for password protection allowing access to be restricted to information based on the user's profile.

Return fraud is significantly reduced through centralized lookup (if your stores have broadband access). To perform a return your associates access the original transaction, allowing an item to be returned in any store, while preventing that item from being "returned" again at a different store or being "returned" without ever being purchased to begin with.

### Makes Your Work Easier

XstorePlus is written to export information to various third party accounting tools. The optional General Ledger Interface eases the exchange of data between XstorePlus and virtually all popular accounting systems.

XstorePlus is easy to support. It's fully integrated, preventing your data from getting lost while transferring from one system to another. Paperwork and recordkeeping are automated, allowing you to focus your energy on the things you do best—selecting great merchandise and providing personal service to your customers.
